Fall 2022 Week 6 Slides 01

### Let's Discuss

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM CARTER

Let's Discuss

Tuples in
Python

Defining tuples

Dictionaries

Randomly Choosing Elements

### **Key Questions**

How do I use the mathematical concepts of **ordered pairs**, **n-tuples**, **lists** and **dictionaries** to implement functions with a clearly specified behaviors?

#### Learning Objectives

To **remember** and **understand** some discrete mathematics and Python programming concepts, enabling the investigation of practical applications

### What are Ordered Pairs?

Some definitions

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM CARTER

Let's Discuss

Python

Defining tuples

Dictionaries

Randomly Choosing Elements

- Mathematical concepts yield predictable programs
- Understanding the concept of an **ordered pair**:
  - Pair: a grouping of two entities
  - Ordered: an order of entities matters
  - Ordered Pair: a grouping of two entities for which order matters
  - Coordinate on Earth: the latitude and longitude coordinates are an ordered pair
  - Complex Numbers: the real and imaginary parts are an ordered pair
  - An ordered pair is not the same as a set of two elements!
     Why?
  - Can we generalize to an ordered grouping beyond two entities? How?

## Practical Applications of Ordered Pairs

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM CARTER

Let's Discuss

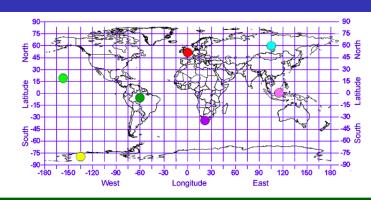

Python

Defining tuples

Dictionaries

Defining Dictionari

Randomly Choosing Elements

### Ordered Pairs: A global address system

Hawaii, USA 19.5429, 155.6659 (Green Dot)

Paris, France (48.8566, 2.3522) (Red Dot)

Meadville, PA: (41.6414, 80.1514)

## Practical Applications of Ordered Pairs

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM CARTER

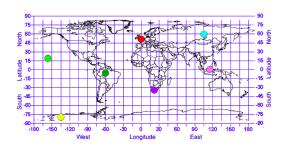

Let's Discuss

Tuples in Python

Dictionaries

Defining Dictionaries

Randomly Choosing Elements

#### Understanding the order of the pair

- Specified according to the standard (Latitude, Longitude)
- Why does the order matter for these pairs of location data?
- How do you interpret the **positive** and **negative** numbers?

# Generalizing Ordered Pairs to n-Tuples

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM CARTER

Let's Discus

Python

Defining tuples

Defining Dictionari

Randomly Choosing Elements

- We could have an "ordered triple" or "ordered quadruple"
- The *n*-tuple is the generic name for "tuples" of any size
  - A 2-tuple is the same as an **ordered pair**
  - A 3-tuple is the same as an **ordered triple**
  - A 4-tuple is the same as an **ordered quadruple**
  - n-tuples contain a finite number of entities
- We write *n*-tuples with notation like (1,2) or (x,y,z)
- Denoting *n*-tuples enable the creation of new mathematical objects
- While the type of entity in an *n*-tuple may be different, not every entity in the *n*-tuple must be different. This means that **duplicates** are **possible**!

## Generalizing Ordered Pairs to n-Tuples

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM-CARTER

Let's Discuss

Tuples in Python Defining tuples

Dictionaries

Defining Dictional

Randomly Choosing Elements

```
empty_tuple = ()
single_number = (3,)
what_var_a = (3)
type(what_var_a) # What do you find?

what_var_b = (3,)
type(what_var_b) # What do you find?

second_var = (3,4)
type(second_var) # What do you find?
```

- Some tuples may not (yet) contain any data in them!
- Singleton tuples must use the comma notation
- What is the difference between a tuple and a number?

# Tuples

A Tuple is a collection of Python objects separated by commas

```
Discrete
Structures:
Data
Containers
CMPSC 102
```

BONHAM CARTER

```
Let's Discus
```

Python
Defining tuples

Dictionaries

Randomly Choosing Elements

### An empty tuple

```
empty_tuple = ()
print (empty_tuple)
type(empty_tuple) # <class 'tuple'>
```

#### A non-empty tuple

```
nonEmpty_tuple = ("a","b","c","d")
nonEmpty_tuple[0] # 'a'
nonEmpty_tuple[len(nonEmpty_tuple)-1]
# gets last element: 'd'
```

#### Check to see that elements are in a tuple

```
nonEmpty_tuple # ('a', 'b', 'c', 'd', 4, 'Hi')
"Hi" in nonEmpty_tuple # True
4 in nonEmpty_tuple # True
3 in nonEmpty_tuple # False
```

# **Tuples**

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM-CARTER

Let's Discus

Let's Discus:

Python

Defining tuples

Defining Dictionari

Randomly Choosing Elements

#### Checking for sub-elements in tuple

```
nonEmpty_tuple = ("a","b","c","d", 4, "Hi", "My music")
print(nonEmpty_tuple)
```

```
"my" in nonEmpty_tuple  # False
"My" in nonEmpty_tuple  # False
"Hi" in nonEmpty_tuple  # True
"HI" in nonEmpty_tuple  # False
```

# check to see if detail is in a substring in tuple
"My" in nonEmpty\_tuple[6] # True

# Adding to Tuples

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM CARTER

Let's Discus

Tuples in Python

Defining tuples

Dictionaries

Randomly Choosing Elements

#### Convert tuple to list, add element, append, convert back

```
a_tuple = ('2',) #define Tuple
items = ['a', 'b', 'c', 'd'] # elements to add
l_list = list(a_tuple)# make a list
for x in items:
    l_list.append(x) # add items to list
#output as a tuple
print(tuple(l_list))
```

# Adding and Removing items to Tuples

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM CARTER

Let's Discuss

Python
Defining tuples

Dictionaries

Defining Dictionaries

Randomly Choosing Elements

#### combining two tuples

```
s_tuple = (1,2,3)
type(s_tuple) # <class 'tuple'>
s_tuple = (1,2,3) + (3,4,5)
s_tuple # (1, 2, 3, 3, 4, 5)
```

### tuple to list, remove element, list to tuple

```
s_tuple = (1,2,3)
type(s_tuple) # <class 'tuple'>
s_tuple = list(s_tuple)
s_tuple .remove(1)
s_tuple = tuple(s_tuple)
print(s_tuple, type(s_tuple))
```

## Iterating Through Elements in Tuples

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM-CARTER

Let's Discus

Python
Defining tuples

Dictionaries

Defining Dictionarie

Randomly Choosing Elements

#### Iteration

```
nonEmpty_tuple = ("a","b","c","d", 4, "Hi", "My music")
for i in nonEmpty_tuple:
    print(i)
```

#### Iteration

```
for i in range(len(nonEmpty_tuple)):
    print("i= ",i, "nonEmpty_tuple[i]=",nonEmpty_tuple[i])
```

#### Note

• With tuples (like lists), we know which element will be printed first (the first element, from above).

# Packing and Unpacking Tuples

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM-CARTER

Let's Discus

Python

Defining tuples

Dictionaries

Defining Dictionaries

Randomly Choosing Elements

### Pack a tuple into a variable

pair = (3,4)

pair[0] # 3
pair[1] # 4

Unpack the contents of a tuple

x, y = pair

(x, y) = pair

#### Unpack and perform simultaneous assignment

x, y = y, x

(x, y) = (y, x)

### **Dictionaries**

An array of a key and a value that is connected for quick searching

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM CARTER

Let's Discuss

Let's Discust

Defining tuple

Defining Dictionaries

Randomly Choosing Elements

- A dictionary maps a set of objects (keys) to another set of objects (values).
- A Python dictionary is a mapping of unique keys to values.
- Dictionaries are mutable, which means they can be changed.
- The values that the keys point to can be any Python value

### An empty dictionary

```
myDictionary_dict = {}
print (myDictionary_dict)
type(myDictionary_dict) # <class 'dict'>
```

### **Dictionaries**

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM-CARTER

Let's Discus

Python

Defining tuples

Defining Dictionaries

Randomly Choosing Flements

#### Adding to a dictionary

```
myDictionary_dict = {}
myDictionary_dict[0] = "zero"
myDictionary_dict[0] # gives 'zero'

myDictionary_dict[1] = "one"
print (myDictionary_dict) #{1: 'one', 0: 'zero'}
```

### Removing elements from a dictionary

```
myDictionary_dict = {}
myDictionary_dict[3] = "three"

del myDictionary_dict[3]
print (myDictionary_dict) #{} (is empty)
```

## Randomly Choosing Elements

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM CARTER

Let's Discuss

....

D.C.

Dictionaries

Defining Dictionarie

Randomly Choosing Elements

### Choosing Elements from a List

```
import random
abc_list = ['a','b','c','d','e']
random.choice(abc_list) # 'c'
random.choice(abc_list) # 'd'
```

#### Choosing Elements from a List

```
import random
abc_set = set(['a','b','c','d','e'])
  # convert to list
abc2_list = list(abc_set)
random.choice(abc2_list) # 'd'
```

### Randomly Choosing Elements

Discrete Structures: Data Containers CMPSC 102

Oliver BONHAM CARTER

Let's Discus

Python

Defining tuples

Defining Dictionarie

Randomly Choosing Elements

### Choosing Elements from a Dictionary

```
import random
abc_dict = {1:"one",2:"two",3:"Three"} # {vals : keys}
num_list = list(abc_dict) # convert dict to list
n = random.choice(num_list) # pick a number in list
abc_dict[n] # sub in n to get key value
# 'two'
```
